Market Dashboard

Live Site: <https://market-dashboard-4bd66d.gitlab.io>

Static stock dashboard with daily auto-refresh via GitLab CI/CD (Yahoo Finance), hosted on GitLab Pages.

Data Updates: Mon–Fri at 16:30 US Eastern (20:30 UTC)

Features

- **Multi-Category ETF Tracking:** Monitor 180+ ETFs across 7 categories:
 - Indices (SPY, QQQ, DIA, etc.)
 - S&P Style ETFs (Value, Growth, etc.)
 - Select Sector ETFs (XLE, XLF, XLK, etc.)
 - Equal-Weight Sector ETFs
 - Industry ETFs
 - Country ETFs (EEM, EFA, etc.)
 - Leveraged ETFs (TQQQ, SQQQ, DPST, etc.)
- **Advanced Technical Indicators:**
 - **Grade (ABC Rating):** Trend strength based on EMA10 > EMA20 > SMA50 alignment
 - **ATR%:** Daily ATR as percentage of price
 - **ATR_x:** Distance from SMA50 in ATR units
 - **1M-VARS:** Volatility-Adjusted Relative Strength vs SPY (21-day)
 - **VARS:** Relative strength visualization chart
 - **Daily/Intra/5D/20D:** Performance metrics with visual bars
- **Interactive Charts:** TradingView integration with:
 - Single chart view (one symbol at a time)
 - Multi-chart grid view (entire sector at once)
 - SPY overlay comparison
 - MA% Ribbon indicator
- **ETF Holdings:** View top 10 holdings for any ETF with weight percentages
- **Market Data Tools:**
 - Economic Calendar (TradingView widget)
 - Market Breadth overview

- **User Experience:**
 - Keyboard navigation (Arrow keys to browse, H for holdings)
 - Column sorting (click any header to sort)
 - Dark theme UI
 - Auto-refresh daily via GitLab CI/CD

Build data locally

```
cd market-dashboard
pip install -r requirements.txt
python scripts/build_data.py --out-dir data
```

This generates: `data/snapshot.json` , `data/events.json` , `data/meta.json` , and `data/charts/*.png` .

Local preview (required): Do not double-click `index.html` - the browser will block loading `data/*.json` . From the `market-dashboard` folder run a local server, then open the URL:

```
cd market-dashboard
python -m http.server 8000
```

Then in your browser open: <http://localhost:8000>

Publish to GitLab (first time)

1. On [GitLab](#), create a **new repository** (e.g. `market-dashboard`). Do **not** add a README or `.gitignore`.
2. In a terminal, from the `market-dashboard` folder run (replace `YOUR_USERNAME` and repo name if different):

```
git remote add origin git@gitlab.com:YOUR_USERNAME/market-dashboard.git
git branch -M main
git push -u origin main
```

3. Then follow **Deploy to GitLab Pages** below.

Deploy to GitLab Pages

1. Create a new GitLab repository and push this directory's contents to it (or push as the repo root).
2. **Before first deploy** you need initial data. Either:
 - **Recommended:** In the repo go to **CI/CD > Pipelines** > Run Pipeline. When it finishes, it will commit `data/` to the repo.
 - Or run locally: `python scripts/build_data.py --out-dir data` , then `git add data/` , commit and push.
3. In the repo **Settings > Pages**:
 - The site will be automatically deployed from the `main` branch.
 - Enable GitLab Pages in Settings if not already enabled.
4. The pipeline runs daily at 20:30 UTC (Mon-Fri) to refresh data; you can also run it manually from **CI/CD > Pipelines**.

Site URL: <https://<your-username>.gitlab.io/<repo-name>>/

Project structure

```
market-dashboard/
├── .gitlab-ci.yml           # Daily data refresh (GitLab CI/CD)
├── scripts/build_data.py    # Fetches data, outputs JSON + charts
├── data/                   # Generated (commit for Pages)
│   ├── snapshot.json
│   ├── events.json
│   ├── meta.json
│   └── charts/*.png
└── index.html              # Static frontend
```

└─ requirements.txt
└─ README.md

Data: Yahoo Finance (yfinance), economic calendar and market breadth (TradingView widgets).
Charts: TradingView widget.
